Welcome to Central London's newest large volume studio. Mocap service work is our speciality and we work seamlessly with you from concept to delivery. From an affordable one-day shoot to full production hire, we manage characters, rigging, capture and clean up for you, either in our studio or a location to suit you. Delivering a complete performance capture solution, with fast turn around data when you need it - every time.

## MOCAP SHOOTS

Our studio has a trackable volume of 9m x 4.5m (max 2.75m height) allowing capture of up to five performers including full body, finger and facial expression capture. We use HD witness cams plus floating or on-body reference microphones. Pre-viz, post-viz, data cleaning, re-targeting and post-animation are all taken care of.

## TALENT POOL

T3D's pool of talented performers are on standby to bring your production to life; mocap-trained actors, creature specialists, dancers, combatants, musicians and stunt artists are available from our inhouse agency.

## POST-PROCESSING

We deliver the data you need, be it raw, cleaned or retargeted, in a range of industry-standard formats at your chosen frame rate (max 360fps). In addition to data, we provide audio and video witness cam reference and full synchronisation of the takes for performance capture.

## 360 FILMING

Our 360 profile films, advertising campaigns, event showpieces and touring installations are led by the Cinematographer & Director Peter Collis. His production experience & skills in the 360 environment ensure you're in safe hands.

## WORKSHOPS

Led by Producer and Lecturer at the acclaimed Met Film School, Ryan Mercier, our Motion Capture Performance Workshops are designed for actors and performers to learn all about mocap, get to grips with performing in the volume and create their own showreels.

## CONTENT CREATION

We partner with the best in the industry to create compelling content for you, including 360 live action filming, photogrammetry, 4D videogrammetry stages, animation and asset & environment building.

# THE HOME OF MOTION CAPTURE
